MTAOS add aberrations to M1M3+M2+hexapod

This notebook is used for the level 3 integration tests from test plan LVV-P81 (https://jira.lsstcorp.org/secure/Tests.jspa#/testPlan/LVV-P81) as part of test cylce LVV-C176 (https://jira.lsstcorp.org/secure/Tests.jspa#/testCycle/LVV-C176). The following tests are currently run as part of this notebook:

- LVV-T2190 (https://jira.lsstcorp.org/secure/Tests.jspa#/testCase/LVV-T2190)

Execution steps are separated by horizontal lines. Upon completion, save the notebook and its output as a pdf file to be attached to the test execution in JIRA.

Last updated by E. Dennihy 20211020

Load all the needed libraries. Get the remotes ready Code in the notebook including section: "Check the summary state of each CSC".

```

Recover and try again

---

add 1um of z7 to the system via OFC

Compare the corrections sent vs forces and position changes applied. This is currently done in a separate notebook.

In [30]:
```
wavefront_errors = np.zeros(19)
```

In [31]:
```
wavefront_errors[3] += 1.0 # add1 um to z7
```

In [32]:
```
await mtcs.rem.mtaos.cmd_addAberration.set_start(wf=wavefront_errors, timeout=10)
```

Out[32]:
```
<lsst.ts.salobj._ddsutil.MTAOS_ackcmd_fd0Je870 at 0x7fb8d8d24be0>
```

This command primes the corrections, the issueCorrection command is needed to actually command them to be sent

In [33]:
```
await mtcs.rem.mtaos.cmd_issueCorrection.start(timeout=60.)
```

Out[33]:
```
<lsst.ts.salobj._ddsutil.MTAOS_ackcmd_fd0Je870 at 0x7fb91c015f40>
```

Make plots using telemetry from each component to verify the changes in the DOFs. This step does not currently involve running any commands in this notebook. This step must be verified using a separate notebook.

---

reset the corrections using the resetCorrection command

Compare the corrections sent vs forces and position changes applied (these are all expected to be zero). This is currently done in a separate notebook or on Chronograf.

In [40]:
```
await mtcs.rem.mtaos.cmd_resetCorrection.start()
```

Out[40]:
```
<lsst.ts.salobj._ddsutil.MTAOS_ackcmd_fd0Je870 at 0x7fb8f22ddb20>
```

In [41]:
```
await mtcs.rem.mtaos.cmd_issueCorrection.start(timeout=60.)
```

Out[41]:
```
<lsst.ts.salobj._ddsutil.MTAOS_ackcmd_fd0Je870 at 0x7fb90bf99f10>
```

Hit the Rotator limit. Clearing error and back to enable.

---

add 2um of z7 to the system via OFC

Compare the corrections sent vs forces and position changes applied. This is currently done in a separate notebook or on Chronograf.

In [36]:
```
wavefront_errors[3] = 2.0 # add 2.0 um of z7
```

In [37]:
```
await mtcs.rem.mtaos.cmd_addAberration.set_start(wf=wavefront_errors, timeout=10)
```

Out[37]:
```
<lsst.ts.salobj._ddsutil.MTAOS_ackcmd_fd0Je870 at 0x7fb91c708580>
```

In [38]:
```
await mtcs.rem.mtaos.cmd_issueCorrection.start(timeout=60.)
```

Out[38]:
```
<lsst.ts.salobj._ddsutil.MTAOS_ackcmd_fd0Je870 at 0x7fb960a11eb0>
```

Stop Tracking

In [39]:
```
await mtcs.stop_tracking()
```

```
setup.MTCS DEBUG: Stop tracking.
```

Check that the corrections in step 10 are twice of those in step 7. This step does not currently involve running any commands in this notebook. This step must be verified using a separate notebook.

Wrap up. Put each component to the following states: mtaos --> standby m1m3 --> lower mirror --> standby m2 --> standby camera hex --> standby m2 hex --> standby

In [ ]:
```
await mtcs.set_state(salobj.State.STANDBY, components=["mtaos"])
```
