1 MTAOS add aberrations to M1M3+M2+hexapod

This notebook is used for the level 3 integration tests from test plan LVV-P81 (<https://jira.lsstcorp.org/secure/Tests.jspa#/testPlan/LVV-P81>) as part of test cycle LVV-C176 (<https://jira.lsstcorp.org/secure/Tests.jspa#/testCycle/LVV-C176>). The following tests are currently run as part of this notebook:

- LVV-T2190 (<https://jira.lsstcorp.org/secure/Tests.jspa#/testCase/LVV-T2190>)

Execution steps are separated by horizontal lines. Upon completion, save the notebook and its output as a pdf file to be attached to the test execution in JIRA.

Ready M1M3: Raise mirror, turn on FB, clear forces
Need to have M1M3 LUT use its inclinometer.

Ready M2: Turn on FB, clear forces
Need to have M2 LUT use its inclinometer

Get camera hexapod ready: check config; make sure LUT is on, and has valid inputs; make sure hex is at LUT position

Get M2 hexapod ready: check config; make sure LUT is on, and has valid inputs; make sure hex is at LUT position

Slew to the next target. Choose a target such that the rotator stays within a couple of degrees of its initial position. This is because the CCW is not running (MTmount in simulation mode).

```

add 1um of z7 to the system via OFC

Compare the corrections sent vs forces and position changes applied. This is currently done in a separate notebook.

```
[11]: wavefront_errors = np.zeros(19)
```

```
[12]: wavefront_errors[3] += 1.0 # add1 um to z7
```

```
[13]: print(await mtcs.rem.mtaos.cmd_addAberration.set_start(wf=wavefront_errors,
↳ timeout=10))
```

```

This command primes the corrections, the issueCorrection command is needed to actually command them to be sent

```
[14]: salobj.current_tai()
```

```
[14]: 1636480505.3890316
```

```
[15]: await mtcs.rem.mtaos.cmd_issueCorrection.start(timeout=60.)

```

Make plots using telemetry from each component to verify the changes in the DOFs. This step does not currently involve running any commands in this notebook. This step must be verified using a separate notebook.

reset the corrections using the resetCorrection command

Compare the corrections sent vs forces and position changes applied (these are all expected to be zero). This is currently done in a separate notebook or on Chronograf.

```
[16]: await mtcs.rem.mtaos.cmd_resetCorrection.start()
```

```
[16]: <ddsutil.MTAOS_ackcmd_8e276e56 at 0x7f4e3c3b0610>

add 2um of z7 to the system via OFC

Compare the corrections sent vs forces and position changes applied. This is currently done in a separate notebook or on Chronograf.

```
[18]: wavefront_errors[3] = 2.0 # add 2.0 um of z7
```

```
[19]: print(await mtcs.rem.mtaos.cmd_addAberration.set_start(wf=wavefront_errors,

error: 0, result: Done, host: 0, identity: edennihy@nb-edennihy, origin: 55787,

```

```

```

```

```

Stop Tracking

```
[21]: await mtcs.stop_tracking()
```

```
<IPython.core.display.HTML object>
```

```
[22]: salobj.current_tai()
```

```

```

Check that the corrections in step 10 are twice of those in step 7. This step does not currently involve running any commands in this notebook. This step must be verified using a separate notebook.

Wrap up. Put each component to the following states: mtaos -> standby m1m3 -> lower mirror -> standby m2 -> standby camera hex -> standby m2 hex -> standby
