

# IM(G): One time ComCam Image Ingestion and MTAOS Correction

This notebook is used to execute the [LVV-T2228 \(1.0\)](#) test script during System Spread Integration Tests on Level 3.

It is part of the plan [LVV-P81](#) and of the test cycle [LVV-C176](#).

Execution steps are separated by horizontal lines.

Upon completion, save the notebook and its output as a pdf file to be attached to the test execution in JIRA.

In summary, you slew to a target and start tracking. Then you find the Wavefront Error as Zernike Coefficients, convert them to corrections to be applied to M1M3, M2, Camera Hexapod and M2 Hexapod. Finally you stop tracking.

```
In [1]: from lsst.ts import utils
import yaml

# Extract your name from the Jupyter Hub
__executed_by__ = os.environ["JUPYTERHUB_USER"]

# Extract execution date
__executed_on__ = utils.astrophy_time_from_tai_unix(utils.current_tai())
__executed_on__.format = "isot"

# This is used later to define where Butler stores the images
summit = os.environ["LSST_DDS_PARTITION_PREFIX"] == "summit"

print(f"\nExecuted by {__executed_by__} on {__executed_on__}."
      f"\n  At the summit? {summit}")
```

```
| lsst.ts.utils.tai INFO: Update leap second table
```

```
| lsst.ts.utils.tai INFO: current_tai uses the system TAI clock
```

```
Executed by blquint on 2022-06-03T19:06:18.930.
```

```
  At the summit? True
```

---

## Initial Setup

log onto the summit nublado

<https://summit-lsp.lsst.codes/>

git clone the ts\_notebook repo

There will be a series of procedures to set up, "slew" and track the telescope before we get an image.

This is similar to test case [LVV-T2189](#).

---

## Check ComCam Playback Mode

Verify that ComCam can be use the playback option and that the required images are stored in the right place **TBD**.

---

## Load all the needed libraries

Using the setup procedure, get the remotes and the components ready.

This includes simulators as well as real hardware when available (this will depend on when the test is conducted at NCSA or on level 3 or on the telescope):

- pointing
- mount ( with the CCW)
- rotator
- ready M1M3: raise mirror, turn on FB, clear forces. Note that if used at level 3, we need to have M1M3 LUT use mount telemetry
- ready M2: turn on FB, clear forces. Note that if used at level 3, we need to have M2 LUT use mount telemetry
- Get cam hex Ready: check config; make sure LUT is on and has valid inputs; make sure hex is at LUT position
- Get M2 hex (simulator) Ready: check config; make sure LUT is on and has valid inputs; make sure hex is at LUT position
- Finally, get the MTAOS CSC ready

---

## Slew and Track

Using the slew procedure, slew the systems to a specific elevation, azimuth and rotator angle. Verify that the telemetry is generated.

Slew to **RA 20:28:18.74** and **DEC -87:28:19.9** with **rot\_type=RotType.Physical** and **Rotator Angle of 0°**. We use this field because it is the field that was simulated and that is a field that is visible the whole year.

RotType Physical Ensures that the Rotator will not move. This is necessary because the CCW is not running (MTmount in simulation mode).

Slew to target:

```

In [13]: await mtcs.slew_icrs(ra="20:28:18.74", dec="-87:28:19.9", rot_type=RotType.Sky,

```

## Take in-focus image

Once the different components are ready (M1M3, M2, rotator and CCW, hexapods) and tracking, take an image using the `take_image` command in playback mode.

This second image should be the one that uses the correction calculated with the first slew.

```

In [36]: # exp_focus = await comcam.take_object(15)
         # print(f"Target exposure: {exp_focus}")

```

```

| setup.ComCam DEBUG: Generating group_id
| setup.ComCam DEBUG: imagetype: OBJECT, TCS synchronization not configured.
Target exposure: [2022051300008]

```

## Intra Focus Position

Using the Camera Hexapod, piston ComCam +1mm

```
In [33]: await mtcs.move_camera_hexapod(x=0,y=0,z=1000,u=0,v=0, w=0)

| setup.MTCS INFO: Camera Hexapod compensation mode enabled. Move will offset
| with respect to LUT.
| setup.MTCS DEBUG: Wait for Camera Hexapod in position event.
| setup.MTCS DEBUG: Camera Hexapod in position: True.
| setup.MTCS DEBUG: Camera Hexapod already in position. Handling potential ra
| ce condition.
| setup.MTCS INFO: Camera Hexapod in position: False.
| setup.MTCS INFO: Camera Hexapod in position: True.
| setup.MTCS DEBUG: Camera Hexapod in position True. Waiting settle time 5.0s
```

---

## Intra Focus Image

While tracking, take an image with ComCam and check that the header is containing the right telemetry

```
In [34]: exp_intra = await comcam.take_object(15)
| print(f"Target 1 exposure: {exp_intra}")

| setup.ComCam DEBUG: Generating group_id
| setup.ComCam DEBUG: imagetype: OBJECT, TCS synchronization not configured.
| Target 1 exposure: [2022060300005]
```

---

## Extra Focus Position

Using the Camera Hexapod, piston ComCam to -1mm

```
In [35]: await mtcs.move_camera_hexapod(x=0,y=0,z=-1000,u=0,v=0, w=0)

| setup.MTCS INFO: Camera Hexapod compensation mode enabled. Move will offset

## Wrap Up and Shut Down

This section is intended for shutting down the system and should not be run as part of the regular testing procedure. Only run the following cells if you are done with the system and don't plan on executing any further tests.

```
In [ ]: await mtcs.set_state(salobj.State.STANDBY, components=["mtaos"])
```

```
In [ ]: await mtcs.lower_m1m3()
```

```
In [ ]: await mtcs.set_state(salobj.State.STANDBY, components=["mtm1m3"])
```

```
In [ ]: await mtcs.set_state(salobj.State.STANDBY, components=["mtm2"])
```

```
In [ ]: await mtcs.set_state(salobj.State.STANDBY, components=["mthexapod_1"])
```

```
In [ ]: await mtcs.set_state(salobj.State.STANDBY, components=["mthexapod_2"])
```

```
In [ ]: await mtcs.standby()
```

```
In [ ]: await comcam.standby()
```
